Know Your Rights in Ten Minutes: A Reliable Legal Guide

Team Name: Chaos Engineers	**PS No.:** 5	**Domain:** Social Impact & Women Safety

1. PROBLEM STATEMENT

People facing harassment, legal disputes, or rights violations rarely know which legal provisions apply, which court or agency to approach, or what evidence is required to build a viable case. When conventional legal counsel is unaffordable or unavailable, self-represented litigants are left to navigate complex court processes entirely alone. Existing legal chatbots offer little practical help: they deliver surface-level definitions, lack multi-statutory reasoning, hallucinate deadlines and sections, and cannot synthesize case facts with past judicial precedents—leaving vulnerable citizens without actionable defense strategies.

2. PROPOSED SOLUTION

We present a comprehensive legal intelligence assistant designed to serve as a reliable digital advisor and pro se defense companion. The system takes case narratives in Hindi or English, parses uploaded case files and evidentiary PDFs, uncovers critical cues, and cross-links related statutory provisions across criminal, civil, and special laws. It pulls matching historical court judgments to establish legal grounds and generates a complete action plan—equipping users to represent themselves effectively when no attorney is available.

3. CORE SYSTEM CAPABILITIES

CAPABILITY	TECHNICAL IMPLEMENTATION	PRACTICAL UTILITY
Document Parsing & Cue Extraction	Extracts timeline events, facts, and documentary proof from uploaded PDFs and user notes.	Identifies hidden facts and structures loose case details.
Cross-Statute Interlinking	Maps extracted facts across an indexed graph of penal codes, civil remedies, and special laws.	Connects overlapping legal sections into a single argument.
Precedent Retrieval	Uses dense vector search to match current facts with historical rulings and binding ratios.	Provides authoritative past judgment citations for court.
Pro Se Defense Blueprint	Generates step-by-step court roadmaps, required forms, arguments, and filing guidance.	Enables individuals to present their own cases directly.

4. TECHNICAL APPROACH & GUARDRAILS

A. Retrieval & Strategy Pipeline

- **Multilingual Processing:** Handles Hindi, English, and mixed-language queries, mapping them directly to underlying legal concepts.
- **Cross-Referencing Engine:** Links facts to specific sections across different statutes simultaneously to avoid missing claims.
- **Precedent Search:** Retrieves matching judicial rulings from indexed legal databases based on fact pattern similarities.

B. Grounding & Verification

- **Deterministic Auditing:** Every section, form, office, and deadline in the generated output is strictly validated against the knowledge base.
- **Zero Hallucination Guarantee:** Sentences that cannot be cited directly are removed. If data is missing, the system redirects to legal aid (DLSA).
- **Session Privacy:** Runs ephemerally without storing personal user information or case history.

5. EXPECTED IMPACT & DELIVERY

By giving citizens clear, verified first steps and complete procedural blueprints, the system levels the playing field for self-represented litigants. This directly supports **SDG 16** (Peace, Justice, and Strong Institutions), **SDG 5** (Gender Equality), and **SDG 10** (Reduced Inequalities).

Implementation Stack: Light React web app frontend, Spring Boot backend API, and a Python vector retrieval engine. Designed to run smoothly over slow network connections with sub-10-minute turnaround times.
